Welcome to Jagadeesh Web Server

Project-1 : 2-Tier Web Application Infrastructure

This project demonstrates how Terraform provisions a complete 2-Tier Web Application Infrastructure on Amazon Web Services (AWS).

Infrastructure Deployment Workflow

1. Configure Remote Backend (Amazon S3)
2. Configure AWS Provider
3. Create Amazon VPC
4. Create Public Subnet
5. Create Private Subnet
6. Attach Internet Gateway

- 4. Create Public Subnet
- 5. Create Private Subnet
- 6. Attach Internet Gateway
- 7. Configure Route Table
- 8. Create Security Groups
- 9. Launch Web Server (EC2)
- 10. Launch Database Server (Private EC2)
- 11. Infrastructure Ready

2-Tier Architecture

Internet
|
Internet Gateway
|
Public Subnet
(Web Server)
|
Security Group
|
Private Subnet
(Database Server)

Technology Stack

- Terraform
- Amazon Web Services (AWS)
- Amazon VPC
- Amazon EC2
- Amazon S3 (Remote Backend)
- Internet Gateway
- Security Groups
